

HIPAA SECURITY RISK ASSESSMENT

A security risk assessment, followed by a properly enforced policy, is not only the best way to mitigate the risk of breach in patient health information, but also an organization's best defense against liabilities that typically follow if a breach were to occur in the future, despite all the measures in place.

Visit us at: <http://www.datadynamics-inc.com>

HIPAA Security Rule: 45 CFR 164.308, requires an organization dealing with patient healthcare records to: *"Conduct an accurate and thorough assessment of potential risks and vulnerabilities to the confidentiality, integrity, and availability of electronic protected health information held by the covered entity."*

Have you conducted a HIPAA risk assessment? If not, let our experts help you achieve your HIPAA compliance and reduce your security risks.

Data Dynamics will conduct a thorough assessment of your practice's HIPPA compliance and then review the results with you. We will give you a report on our findings and also a template document that will help you write your own security policies customized for your organization. When enforced, your security policies will help mitigate security risks and ensure continuing HIPPA compliance.
